# WeRateDogs Review
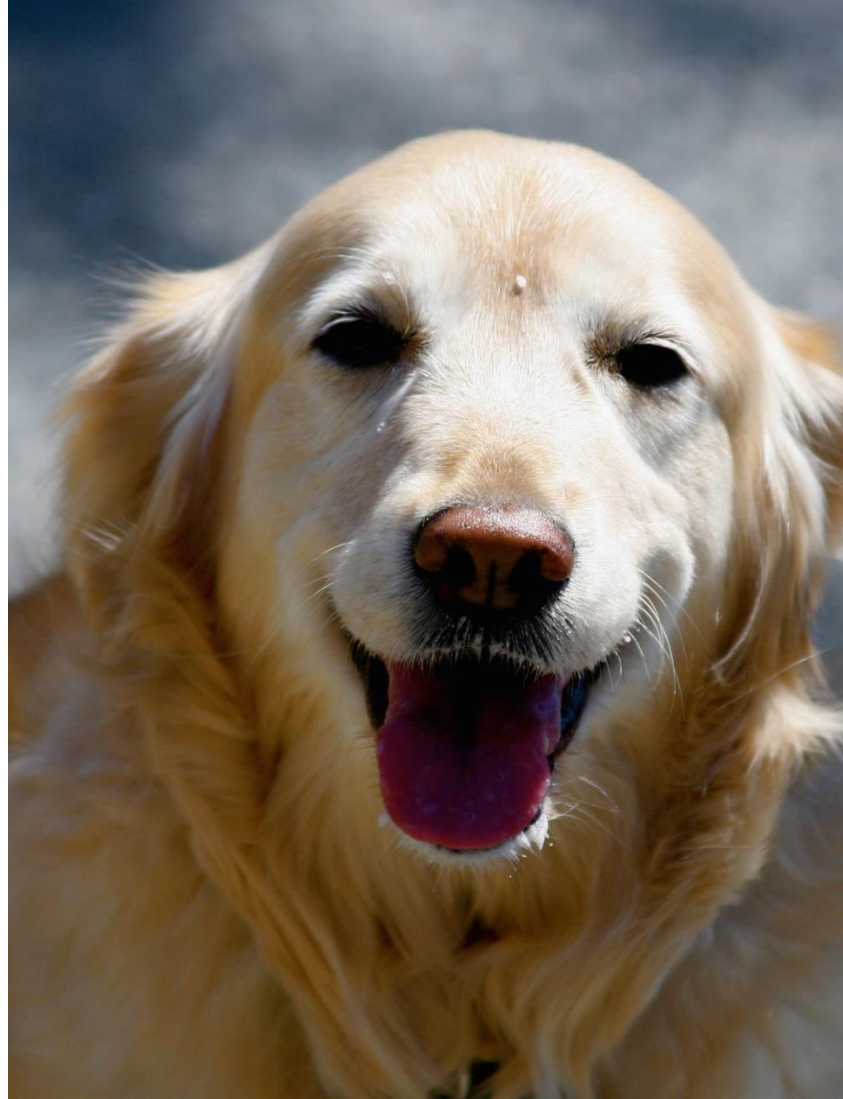

# WeRateDogs

Visualizations and Insights

WeRateDogs is a Twitter account capture the idea of posting dogs' pictures and then rating the dogs but here comes the interesting part where here is a unique rating system, where nearly always the numerator is higher than the denominator.
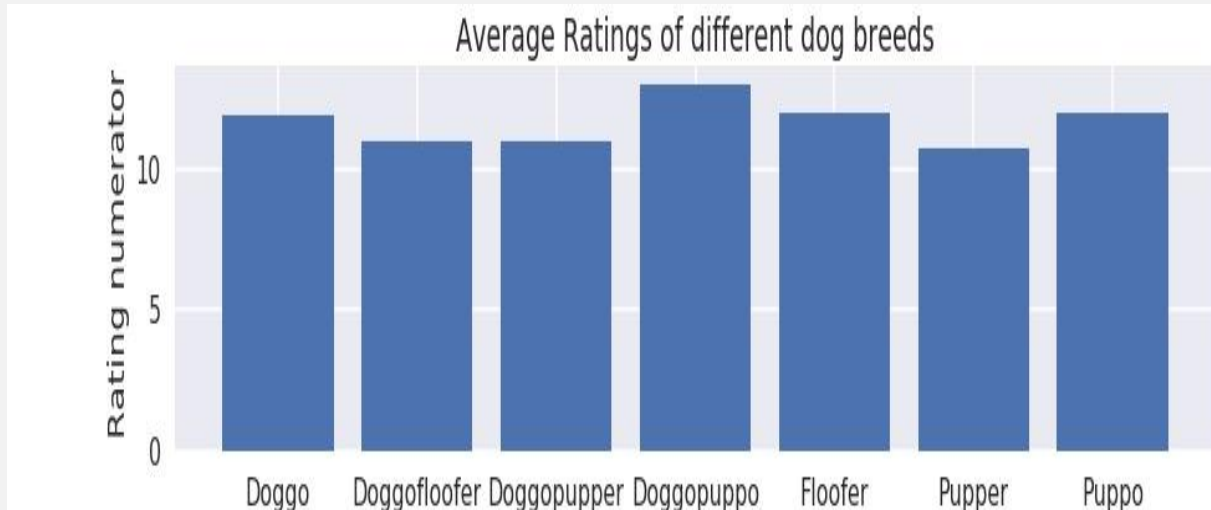

## That is cool !!! but Why?? …….

### It is easy, as there is no bad dog.

**Now, we have a brief journey with some data analysis with this exciting Twitter account, so let's explore!!!!**

**What is the dog_breed receives the highest average rating_numerator?**
- **With the aid of some visualization we noticed that received the highest numerator rating goes to the doggo_puppo stage but not with a great difference though.**

Average Ratings of different dog breeds

- **What is the interaction with different dog stages?**
  **Here we explore the relationship between dog stages , average retweet count and average favorite counts, and as we see again the doggo_puppo stage shows a significant increase in average favorite count**

- **Exploring the change of the public response over time**

Here we made an analysis of the change of average favorite count over time and as we can from our visualization there is a significant increase in the average favorite count which is a good indicator of the successes of the idea or the WeRateDogs.

Interaction Upon Time
